

SYLVIA STOCKER- THE “5 PREMIUM SPEAKERS QUESTIONS”

12. September 2025 – Astrid Berndt

Sylvia Stocker is one of the most influential voices in robotics and artificial intelligence in Europe. As founder and CEO of Arabesque Robotics, she was named Most Influential CEO in Robotics & AI in 2025. Her mission: human-centered technological transformation. With visionary keynotes, interactive formats, and live experiences, she shows what the next stage of evolution for humans and machines looks like—and why technology does not replace but rather enhances the human experience.

Interview with Sylvia Stocker:

1. What are the core subjects of your keynote speeches?

Sylvia Stocker: AI – Robotics – Human I speak about the future, a future that has already begun, and how we as humans can take empowered action. My keynotes focus on technological and human transformation, with a sharp lens on artificial intelligence, robotics and mindset. I reveal how humanoid robots and AI-powered systems are reshaping the way we work, communicate, and lead – not in the future but now. This isn't just about technology. It's about bold choices, human collaboration, and new opportunities. My core topics include:

- Humanoids & Humans – the next frontier
- AI & Mindset – Unleash your power: the AI revolution starts with you
- Automation with Robotics & AI – hands-on, with real-world impact

2. Which audience or which branch do you reach with your speech?

Sylvia Stocker: CEO's & Executives of any industry I speak to C-level executives, innovation leaders, tech decision-makers, and entrepreneurs who know change is necessary and are looking for clarity and direction. My keynotes are for everyone who carries responsibility – and for everyone curious enough not just to watch the future unfold, but to shape it. I equally enjoy inspiring teams, specialist audiences, and minds who are ready to think differently and move forward with courage. Because in the end, technological transformation affects every industry, every organisation, and every individual.

3. Are you a PREMIUM SPEAKER? Where do you get your insights from?

Sylvia Stocker: I have spent over two decades at the intersection of Technology, economics and art – leading more than 200 projects across industries and continents. My career has taken me from the disciplined world of Swiss banking to the global stage and into pioneering Robotics & AI solutions for organisations worldwide. With years of speaking experience on some of the most prominent stages, I translate complex technological shifts into actionable steps for leaders. Audiences love my interactive talks as I make the future accessible and understandable.

I get my insights from the years of experience and I do read and learn about Robotics & AI every single day!

4. What will be in the future? Does «time» play an important role in your work?

Sylvia Stocker: The future is shaped by robotics and artificial intelligence – and increasingly so. Time plays a decisive role in this field, because those who adopt automation early on gain a clear “Unfair Advantage” over those who wait.

Looking back, 2025 will likely be seen as the year when humanoid robotics had its breakthrough – in the industry, we call it the “iPhone moment” of robotics. This shift is driven above all by the rapid progress in AI.

Time plays a key role in my field: a clear roadmap provides consistency, but agility is essential to keep pace with rapid technological development.

In the end, what matters most to me is this: technology must serve humanity. Robotics and AI are not here to replace us, but to help us grow, develop our abilities, and fully realize our human potential.

5. Tell us your life motto? What do you want to give your listeners to take with them?

Sylvia Stocker: I live and work from the depth of my values: clarity, joy, freedom, and self-leadership. As a feminine pioneer, I merge visionary thinking with bold action and see myself as a bridge-builder between technology and humanity. My journey – from Swiss banking to art to global speaker and entrepreneur in robotics and AI – shows that transformation begins where we dare to reinvent ourselves. I believe in a life of abundance, ease and authenticity.
